The Data Encryption Standard
(DES / $\square d i \square \square i \square \square \varepsilon s, d \varepsilon z /$) is a
symmetric-key algorithm for the
encryption of digital data.

Although its short key length of
56 bits makes it too insecure for
applications, it has been highly
influential in the advancement of
cryptography.. Developed in the
early 1970s at IBM and based on
an earlier design by Horst Feistel,
the algorithm was ...
