they best communicate their special knowledge to be intelligible? These and a plethora of related questions are being raised by researchers and politicians alike as they have become convinced that science and society need to draw nearer to one another. Once

the persuasion took hold that science should open up to the public and these questions were raised, it became clear that coming up with satisfactory answers would be a complex challenge. The inaccessibility of scientific language and methods, due to ever increasing

the base of its very
success. Thus,

translating

There has been a strong recent trend towards incorporating evidence into Social Work practice in general, and into group work in particular. This trend has focused on the

education of students in the use of evidence, development of evidence-based interventions, and discussion of how evidence can be used to improve practice. A limitation of most of this literature is that it has been written by researchers for the consumption of

practitioners, limiting the ability of evidence-based practices to be incorporated into unique community settings and with specific populations. In spite of this difficulty, implementation of evidence-based practices continues quietly in practice settings. This book

File Type PDF

Mark Kulis 8th

describes efforts to

integrate evidence

into community

settings, which have

two foci. The first

part details group

models developed

through

collaborations

between researchers

and community

agencies. Each

chapter details efforts

to implement,

programs in
community settings.

The second part deals

with issues around

instruction and

dissemination of

evidence-based group

work into practice

settings. The volume

makes a significant

contribution to the

discussion about

work. This book was published as a special issue of Social Work with Groups.
